

Skynamo Integration: Sage Partner

Summary:

Skynamo endeavours to integrate with all Sage products and to this end, we've ensured we can integrate with Sage Partner.

Unless the impact on the system is deemed too large*, Skynamo integration extracts the following datasets from Sage, transforms it and uploads it to Skynamo on an hourly schedule:

- Customers
- Products
- Invoices
- Stock Levels
- Pricing

The Skynamo orders are converted into Sage format every five minutes.

Integration directly from database:

Skynamo's software needs to be installed on the client network and the tasks are triggered using the Windows Scheduled Tasks.

Sage Partner connects with an ODBC connection where data can be transformed and uploaded to Skynamo hourly.

Datasets transferred from Sage to Skynamo, included in our standard offering:

Customers

- Code
- Description (Skynamo name)
- On hold status
- Contact information as customer fields
- Ageing information, with limitations
- Addresses
- Delivery addresses, with limitations
- Price list
- Salesperson

Products

Pricing

- Price list pricing
- Advanced pricing***

Skynamo order integration:

Sage Partner

Skynamo can create the Sage Partner batch file, that can easily be imported by an admin person.

Images

Not available for Sage Partner

Required Information for Setup

In order to set up integration, we require the following pieces of information:

- 1) Access to the server

Ongoing maintenance:

Skynamo needs to be notified on every salesperson change. Please send the new allocation to support@skynamo.com to have the allocation adjusted

Footnotes:

* The first run is done manually and if it runs more than 5 minutes, this is discussed with the client as it may adversely affect the day-to-day operations of the business and the stability of Sage

** Invoices are not audited and outages may result in discrepancies. Skynamo commits to improving the reliability in these cases, but not fix historic data

*** Skynamo commits to applying a best effort to advanced pricing that suits the client. A perfect match is not always viable.
